METAL FASTENERS FOR FURNITURE

Standoff is a furniture fastener engineered for engineered-wood panels (MDF, particle board, plywood), giving strong pull-out resistance and fast, repeatable assembly. It is available for OEM bulk supply with samples, datasheets, and installation drawings on request.

Overview

Standoff is a furniture fastener engineered for engineered-wood panels (MDF, particle board, plywood), giving strong pull-out resistance and fast, repeatable assembly. This page summarizes how to specify it for volume furniture and cabinet manufacturing, including the dimensions and options that matter most to buyers.

Industry Data

Use these product signals to compare fit, specification risk, and sourcing options before requesting samples or bulk pricing.

- **Thread / Diameter:** #10 Confirm the exact value on the order datasheet before production.
- **Length:** 25 mm Confirm the exact value on the order datasheet before production.
- **Head / Drive:** Torx flat head Confirm the exact value on the order datasheet before production.
- **Pilot Hole:** 5 mm system hole Confirm the exact value on the order datasheet before production.
- **Recommended Panel:** 16-25 mm engineered panels Confirm the exact value on the order datasheet before production.
- **Material options:** Stainless Steel, Carbon Steel, Zinc Alloy, Aluminum and Brass Choose material by strength, corrosion exposure, and target price.
- **Finish options:** Brushed Brass, Pewter, Matte Black, Champagne Bronze and Chrome Confirm finish samples when color matching matters.
- **Application fit:** Hospital Furniture, Laboratory Furniture, Retail Display Fixtures and Commercial Display Cabinets Match the product to the furniture use case, not only to the part name.

Standoff

Key Specifications

Thread / Diameter	#10
Length	25 mm
Head / Drive	Torx flat head
Pilot Hole	5 mm system hole
Recommended Panel	16-25 mm engineered panels
Finish / Coating	Yellow zinc
Packaging	Pre-counted hardware pack

Specifications are configurable for OEM/ODM orders. Exact values are confirmed on the datasheet for your order.

How to Choose

- Screw type and thread for the board material
- Head type and drive (Pozi, Torx, hex socket)
- Length and diameter for the joint
- Board material: MDF, particle board, or plywood
- Pre-drilling and pilot-hole requirement
- Pull-out resistance and joint strength
- Bulk packaging and count per carton

Material Options

Hardened carbon steel with zinc plating is standard; stainless suits damp or outdoor-adjacent furniture. Thread geometry is tuned for chipboard and MDF holding power.

- [Zinc Alloy Standoff](#)
- [Aluminum Standoff](#)
- [Brass Standoff](#)
- [Copper Standoff](#)

Finish Options

Zinc-plated (clear or yellow) is the default for corrosion resistance; black and nickel match exposed assembly screws.

Application Fit

[Hospital Furniture](#)

For this application, standoff is specified for the typical load, environment, and usage of this application.

[Laboratory Furniture](#)

For this application, standoff is specified for the typical load, environment, and usage of this application.

[Retail Display Fixtures](#)

For this application, standoff is specified for the typical load, environment, and usage of this application.

[Commercial Display Cabinets](#)

For this application, standoff is specified for the typical load, environment, and usage of this application.

[Store Fixtures](#)

For this application, standoff is specified for the typical load, environment, and usage of this application.

[Restaurant Furniture](#)

For this application, standoff is specified for the typical load, environment, and usage of this application.

Installation Notes

Pre-drill the recommended pilot in MDF and particle board to prevent splitting, then drive to flush without over-torquing. Use the correct bit to avoid cam-out on high-volume lines.

Buying Notes for OEM Orders

For OEM assembly, standardize a short list of screw sizes per joint type and order in bulk cartons with consistent drive type to keep the line fast.

Related Questions

These questions are pulled into the product page as visible Q&A content, not only as plain FAQ links.

What is Confirmat Screw?

Confirmat Screw is engineered for engineered-wood panels (MDF, particle board, plywood), giving strong pull-out resistance and fast, repeatable assembly. It is specified by thread, head, drive, length, and diameter.

[Read the full Confirmat Screw FAQ →](#)

What is Euro Screw?

Euro Screw is engineered for engineered-wood panels (MDF, particle board, plywood), giving strong pull-out resistance and fast, repeatable assembly. It is specified by thread, head, drive, length, and diameter.

[Read the full Euro Screw FAQ →](#)

What is Hinge Screw?

Hinge Screw is engineered for engineered-wood panels (MDF, particle board, plywood), giving strong pull-out resistance and fast, repeatable assembly. It is specified by thread, head, drive, length, and diameter.
